---

This data tool compares European electricity prices, carbon prices and the cost of generating electricity using fossil fuels and renewables. Where possible, data is provided by country.

Germany has returned to the number one slot of Europe's solar ranking, installing 14.1 GW in 2023. Germany is followed by Spain (8.2 GW), Italy (4.8 GW), Poland (4.6 GW), ...

Equipped with 455,000 solar panels, the plant's construction required 500,000 hours of work. This ambitious endeavor underscores ...

The deal was awarded by an unnamed Western European construction company. It involves the delivery of solar inverters, transformers and medium-voltage switchgears for ...

Five solar projects with capacities ranging from 20 MW to 225 MW are planned in Sicily, Apulia and Molise, including Italy's future largest agri-PV ...

In 2024, Germany was the country with the highest electricity generation from solar photovoltaics, amounting to more than 74 terawatt ...

Construction started of a 37 MW solar district heating plant in Groningen, Netherlands. The project entity signed a 30 year solar heat delivery ...

NEPI Rockcastle said its renewable energy output is expected to expand to cover 48% of the electricity demand of its shopping centres ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

The highest solar potential is concentrated in the Iberian Peninsula, the lowlands of Romania, and parts of Central-Eastern Europe, all of which face economic challenges but ...

What's Happening to Solar Energy in Europe (and Italy)? European solar power continues to grow, setting a new historical record in 2024. However, the rapid momentum seen ...

Amarenco announces an international EUR500 million financing deal to support its solar projects in Europe, solidifying its strategic positioning in key markets.

Explore Europe's 2024 solar boom, with gigawatt-scale projects in Germany, Spain, and beyond driving a historic shift in the continent's energy landscape.

While the electricity production capacity from hydro and other renewables such as geothermal or biofuels has remained relatively stable, capacity ...

While the electricity production capacity from hydro and other renewables such as geothermal or biofuels has remained relatively stable, capacity for wind and solar have significantly increased ...

Closing the year, SolarPower Europe has just published its annual EU Market Outlook for Solar Power 2024-2028. Europe has added 66 GW of solar in 2024 - a new record. ...

Our forecasts show that Western Europe will drive 46% of solar deployment in the European continent over the coming decade. ...

Solar power accounts for 6% of electricity production in Albania. More than half of the photovoltaic output is from the Karavasta facility, the biggest of its kind in the Western ...
