
In this study, a novel adaptive inertia control for virtual synchronous generators is proposed for the control of wind-solar-storage combined power generation systems to form the ability for long ...

Innovative contributions: * Developed an autonomous model using intelligent control approaches. * Established a dynamic framework for a hybrid renewable energy system ...

However, in a grid-connected solar power generation system, the system output is often affected by system parameter uncertainties such as parameter changes of the electronic ...

This paper addresses the challenges posed by wind power fluctuations in the application of wind power generation systems within grid-connected microgrids by proposing a ...

Integrating solar power into smart grids is challenging because of the variable nature of solar energy. This study focuses on implementing reinforcement learning (RL) using ...

A second major novelty is the creation of an adaptive photovoltaic system, where perovskite-silicon hybrid solar cells are ...

This paper explores the optimization and design of a wind turbine (WT)/photovoltaic (PV) system coupled with a hybrid energy storage system combining ...

A second major novelty is the creation of an adaptive photovoltaic system, where perovskite-silicon hybrid solar cells are dynamically optimized using real-time AI algorithms.

First an adaptive mode decomposition method is proposed for adaptively eliminating high-frequency information of PV data, mitigating the impact of high noise on the ...

A combination of AI, smart materials, adaptive solar cells, and blockchain power distribution provides a new solution towards weather-independent and autonomous solar power networks.

Day-Ahead Operation Analysis of Wind and Solar Power Generation Coupled with Hydrogen Energy Storage System Based on Adaptive Simulated Annealing Particle Swarm Algorithm

In recent years, the large-scale grid connection of solar photovoltaic power generation system makes the power system gradually show the trend of power electronics. ...

Day-Ahead Operation Analysis of Wind and Solar Power Generation Coupled with Hydrogen Energy Storage System Based on ...

Given these challenges, this research paper introduces a novel adaptive control framework utilizing deep reinforcement learning (DRL), ...

Given these challenges, this research paper introduces a novel adaptive control framework utilizing deep reinforcement learning (DRL), specifically the Asynchronous ...

The Adaptive Neural-Fuzzy Inference System (ANFIS) is chosen for its responsiveness, but designing an efficient ANFIS-MPPT system requires precise training data.

Conventional grid management techniques are often inadequate for addressing the intermittency and uncertainty associated with solar power generation [2, 3]. An effective ...

In the process of integrating distributed energy, photovoltaic (PV) power generation systems encounter issues of intermittency and volatility, posing significant challenges to the ...
