Should I install a wind turbine and solar panel combination system?

When you install a wind turbine and solar panel combination system, you effectively cover your bases and go a long way to making your system more productive. Setting up a wind turbine and solar panel combination is very similar to setting up either system on its own, but with one major exception: your charge control board.

Do wind turbines and solar panels work together?

That still holds true for renewable power systems. A wind turbine and solar panel combination helps you get the best performance from your setup. Our hybrid systems are designed to avoid the common pitfalls that can cause wind- or solar-only systems to come up short. After all, the sun can't always shine and the wind can't always blow.

Should I choose a solar energy system or a wind turbine?

Choosing a solar energy system or a wind turbine for your home depends on a wide range of variables, which you'll want to speak with an expert about. However, solar energy systems are more common for residential applications because they're easier to install and require less maintenance than windmills.

Can a combination wind and solar power system make a difference?

One of the big advantages of a combination wind and solar power system is that often--not always, but often--when sunlight decreases, wind increases and vice-versa. When there's not enough wind to turn your turbines, your solar panels can make up the difference.

Innovations such as hybrid energy systems, which combine solar with wind or battery backup solutions, are gaining traction. These systems ensure even more reliable ...
