-----  
What are the different types of outdoor kitchen cabinet materials?

One of the relatively newer types of outdoor kitchen cabinet materials is PVC (polyvinyl chloride), which is a synthetic polymer material. PVC is one of the most widely used kinds of plastics. Although it was invented well over a century ago, only recently has it been used for outdoor kitchen cabinet manufacturing.

Is wood a safe material for grill cabinets?

Wood is a combustible material. Unless you want to invite a safety hazard to your backyard...It's not the best idea for your grill cabinet. (IMPORTANT NOTE: If you're dead-set on wood cabinets, invest in insulated jackets for your outdoor kitchen appliances. This will make your grill island safer to use.) So there you have it.

Which stainless steel outdoor cabinets are best?

304 stainless steel outdoor cabinets are the best option. This grade of steel is highly resistant to corrosion and rust. On the flip side, avoid cabinets constructed with 201 or 430 stainless steel. These don't have great weather resistance, and are more prone to rust and corrosion.

Which metal cabinet material should you consider?

Another metal cabinet material worth considering is aluminum, but not just any kind of aluminum. Aluminum is naturally corrosion-resistant, which is why it is commonly used for marine applications. The marine grade aluminum used to make outdoor kitchen cabinets comes in thick gauges, which ensure structural stability.

Type V - High Sulfate-Resistant Cement is used in environments with highly alkaline soil and water, such as marine structures and wastewater treatment plants, where ...

Cabinets designed for storing acids and corrosives. In stand-alone floor, undercounter, or countertop units. Available with manual or self-closing ...
