What is a grid tie PV system?

Grid tie (utility tie) PV systems consist of solar panels and a grid-tie inverter, with no batteries. The solar panels feed a special inverter which converts the DC voltage coming from the solar panels directly into AC power to match the grid. Any power produced by the solar panels subtracts from what you are using from the power company.

What is a grid-tie inverter?

Solar grid-tie inverter also gives the owner an option to monitor the functionality of the whole system. Besides, inverters can act as power output maximizers: they track the voltage of panels and identify the optimum operational power for the whole array. How is a grid-tied inverter different from an off-grid inverter?

What is a grid-tie solar power system?

Grid-tie solar power systems are popular with both homes and businesses, as they are connected to the electrical grid. This allows customers to export any excess solar power they generate to the grid, receive credits and use them later to offset energy bills.
