To understand the difference between continuity and uniform continuity, it is useful to think of a particular example of a function that's continuous on \mathbb{R} but not ...

A 1C rate means that the discharge current will discharge the entire battery in 1 hour. For a battery with a capacity of 100 Amp-hrs, this equates to a discharge current of 100 Amps. A 5C ...

Typically the range of a continuous random variable is \mathbb{R} , $[0, \infty)$, or some interval $[a, b]$. Examples of continuous random distributions are the normal ...

9 Continuous Functions are not Always Differentiable. But can we safely say that if a function $f(x)$ is differentiable within range (a, b) then it is continuous in the interval $[a, b]$...

Of course, the CDF of the always-zero random variable 0 is the right-continuous unit step function, which differs from the above function only at the point of discontinuity at $x=0$.

This might probably be classed as a soft question. But I would be very interested to know the motivation

behind the definition of an absolutely continuous function. To state "A real ...

A solar battery can take your solar setup to the next level. Here are the best solar batteries to complement your solar panel system.

A continuous function is a function where the limit exists everywhere, and the function at those points is defined to be the same as the limit. I was looking at the image of a ...
