-----

Large-scale storage systems efficiently integrate increasing renewable electricity into the grid, ensuring power availability when ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

Power systems are undergoing a significant transformation around the globe. Renewable energy sources (RES) are replacing their conventional counterparts, leading to a ...

Thermal energy storage systems can be as simple as hot-water tanks, but more advanced technologies can store energy more densely (e.g., molten salts, as used for ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being ...

Cecilie Kristiansen Research Associate, Energy Storage EMEA Cecile works on research for the power and renewables team, ...

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new ...

CESEC needs laser focus to unlock the opportunities of a diversified renewable energy mix, strategic power

grid interconnection, ...

The Energy Storage Summit Central Eastern Europe served not just as a conference, but as a catalyst for the region's clean energy transition. By spotlighting energy storage's central role in ...

Not only would this improve the resiliency of Eastern Europe's grids, and add flexibility to the system, but Meesak notes that the ...

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

Furthermore, grid and system planning will need to account for the electrification of transport, buildings and industry, as well as innovative solutions such as compressed air ...

These systems will be central to discussions at ees Europe, the continent's largest trade fair for batteries and energy storage, from 7 ...

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched at the Enlit Europe conference by ...

Not only would this improve the resiliency of Eastern Europe's grids, and add flexibility to the system, but Meesak notes that the installation of battery energy storage ...

Learn about Poland's EUR1 billion energy storage subsidy aimed at installing 5.4 GWh of BESS by 2028, strengthening grid stability and accelerating the green transition.

Both Ukraine and Moldova have also adopted the EU's Regulation on Wholesale Energy Market Integrity and Transparency, ...
