How much does a battery energy storage system cost?

Ember provides the latest capex and Levelised Cost of Storage (LCOS) for large, long-duration utility-scale Battery Energy Storage Systems (BESS) across global markets outside China and the US, based on recent auction results and expert interviews. 1. All-in BESS projects now cost just \$125/kWh as of October 2025 2.

Why do we need energy storage costs?

A comprehensive understanding of energy storage costs is essential for effectively navigating the rapidly evolving energy landscape. This landscape is shaped by technologies such as lithium-ion batteries and large-scale energy storage solutions, along with projections for battery pricing and pack prices.

Why are low battery costs a good idea?

Lower battery costs are great for a lot of reasons. Renewables is one of them. Another reason is that batteries function as energy arbitrage devices. They can charge when electricity is cheap and discharge when it is expensive. Even in the winter when solar isn't doing much.

How much does solar storage cost?

Ember estimates that if half of daytime solar generation is shifted to nighttime, the \$65/MWh storage cost adds about \$33/MWh to the cost of solar electricity. With the global average price of solar at \$43/MWh in 2024, adding storage would bring the total cost to about \$76/MWh, delivering power in a way that better matches real demand.
