Are battery energy storage systems a hot topic in 2025?

Battery Energy Storage Systems (BESS) are a hot topic in 2025 for a good reason; much of the modern world wouldn't work without them. With renewable energy being an equally recurring theme, and the needs of data centers as well as large commercial facilities, lithium-ion power presents interesting options.

What is a battery energy storage system?

A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of energy storage technology that uses a group of batteries in the grid to store electrical energy.

How long do battery energy storage systems last?

Battery energy storage systems are generally designed to deliver their full rated power for durations ranging from 1 to 4 hours, with emerging technologies extending this to longer durations to meet evolving grid demands.

Why are battery storage plants using lithium ion batteries?

Since 2010, more and more utility-scale battery storage plants rely on lithium-ion batteries, as a result of the fast decrease in the cost of this technology, caused by the electric automotive industry. Lithium-ion batteries are mainly used. A 4-hour flow vanadium redox battery at 175 MW / 700 MWh opened in 2024.
