What is a BMS battery management system?

Fundamentally, the BMS maintains individual cell balance, tracks the state of health (SOH) and state of charge (SOC), and relays important metrics to external systems. Even the most sophisticated lithium-ion battery pack would be vulnerable to malfunctions and safety risks in the absence of a BMS. How Does a BMS Battery Management System Work?

What is a battery management system?

A battery management system is an electronic system that takes care of rechargeable batteries. It tracks how they work, calculates their status, reports data, controls their environment, and helps them operate safely throughout their life.

What is a battery balancing system (BMS)?

One of the key functions of a BMS is cell balancing, which ensures that each cell in a battery pack is charged and discharged uniformly. Cells in series often exhibit slight differences in capacity, causing certain cells to overcharge or undercharge.

How do battery management systems protect batteries from dangerous conditions?

Battery management systems are the critical intelligence behind modern battery technologies, especially when you have lithium-ion chemistries that just need constant monitoring for safety.
