Why is a battery cabinet dangerous?

o The battery cabinet contains an internal energy source. Hazardous voltage can be present even when the UPS system is disconnected from the utility/ mains supply. Before installing or servicing the UPS system, ensure that the units are OFF and that utility/mains and batteries are disconnected.

What are the safety requirements for a battery cabinet?

o The battery cabinet must be properly earthed/grounded and due to a high leakage current, the earthing/grounding conductor must be connected first. Failure to follow these instructions will result in death or serious injury. Battery Safety DANGER

How to install a battery cabinet in the battery solution?

1. Perform the following steps on all battery cabinets in the battery solution. a. Remove the cover in front of the start-up button and push the start-up button. o The PSU2 LED and the POWER LED will turn on. o The ABNORMAL and ALARM LEDs should remain off. b. Reinstall the cover in front of the start-up button.

How many batteries can be stored in a GFCI cabinet?

A dedicated 10VAC/60Hz GFCI supply using a minimum 14 gauge cord is required (not included). The total number of batteries that can be safely stored and charged in the cabinet will vary based on the amount of energy in each battery. The cabinet's Total Energy Containment Rating (TECR) is 2kWh.  $2,000 / (V \times Ah) =$  number of batteries.

If the temperature exceeds 135 degrees inside the cabinet the spring loaded dampers will close to block the fan opening to reduce the release of smoke and gases by as much as 99%. There is ...

NOTE: The battery temperature must return to room temperature  $\pm 3 \text{ } ^\circ\text{C}$  ( $\pm 5 \text{ } ^\circ\text{F}$ ) before a new discharge at maximum continuous discharge power. If not, the battery breaker may be tripped ...
