Can an off-grid solar system power a whole house in the UK?

Yes, an off-grid solar system can power a whole house in the UK, but it requires careful planning and realistic expectations. Because of this, many UK users adopt a selective-load approach.

What is an off-grid Solar System?

An off-grid solar system is a self-contained power setup that generates and stores electricity without relying on the national grid. In the UK, these systems use solar panels to produce electricity, store that energy in batteries, and then supply power directly to your appliances whenever it's needed.
