How can energy storage manufacturers help the tiering list?

Energy storage manufacturers can help BloombergNEF assess them accurately for the tiering list by sending us data(at batterytier1@bloomberg.net) on the projects they have provided batteries and/or energy storage systems for. This data must include enough information to identify the project uniquely.

What is the bloombergnef Tier 1 energy storage list?

The BloombergNEF Tier 1 Energy Storage list is intended to inform buyers about which batteries and/or energy storage systems are being used in recently developed projects, but should never replace a proper due diligence process in product selection. This document explains the tiering criteria and its limitations.

What is a Tier 1 energy storage brand?

The criterion for an energy storage brand to be listed as Tier 1 is that it must have supplied, or be firmly contracted to supply, products to six different eligible projects in the last two years, which include at least three different buyers. Must be at least 10MW or 10MWh (projects need only meet one of these thresholds).

What is the BNEF energy storage tier 1 list?

The BNEF Energy Storage Tier 1 list is based on BNEF's database of energy storage assets, which is mainly sourced from public information in the form of press releases and filings. Data on large projects is likely to be checked against several different sources.

Grid energy storage, also known as large-scale energy storage, is a set of technologies connected to the electrical power grid that store energy for later use. These systems help balance supply and demand by storing excess electricity from variable renewables such as solar and inflexible sources like nuclear power, releasing it when needed. They further provide essential grid services, such a...
