To begin, let's take a look at two of the main components of wind systems, wind turbines and towers. Subsequent articles contain more detailed discussions of these and other components.

Offshore wind projects consist of multiple wind turbines that are anchored to the seabed. On average, offshore wind turbines are taller than onshore wind turbines, equipped with larger ...

Wind turbines that are erected in large bodies of water. These are generally larger than onshore turbines, and because the larger the turbine the greater the efficiency, they are ...

Small turbines are pointed by a simple wind vane, while large turbines generally use a wind sensor coupled with a yaw system. Most have a ...

This paper reviews the wind energy technologies used, mainly focusing on the types of turbines used and their future scope. Further, the paper briefly discusses certain ...
