How does Uruguay get its electricity?

To this day, Uruguay continues to rely heavily on its dams, including the imposing Salto Grande on the Río Uruguay, whose power is shared with Argentina, and several on the Río Negro. For decades, electricity from those dams and from generators running on gas and oil imported largely from Argentina and Brazil met Uruguayans' energy needs.

Does Uruguay have a power grid?

The map of Uruguay's electrical grid today is starkly different from that of 2008, when the majority of power was generated at a few hydroelectric dams north of Montevideo and the rest at a handful of fossil fuel plants in the capital. It's now possible for the entire grid to run several hours a day entirely on wind power.

Does Uruguay need a thermal power plant?

The country's thermal power plants rarely need to be activated, except when natural resources are insufficient. Half of Uruguay's electricity is generated in the country's dams, and 10% percent comes from agricultural and industrial waste and the sun. But wind, at 38%, is the main protagonist of the revolution in the electrical grid.

How many wind turbines are there in Uruguay?

Today, Uruguay has more than 700 wind turbines distributed throughout its territory. "At first glance, the change is seen in many areas of the country: You go down the road and see the modern windmills in rural areas," Prats said. "Starting in 2010, with the variety of energy sources, and also renewable ones, blackouts became very rare.

Half of Uruguay's electricity is generated in the country's dams, and 10% percent comes from agricultural and industrial waste and the sun. But wind, at 38%, is the main ...

Uruguay runs on 98% renewable energy. Biomass, solar and around 50 wind parks have replaced fossil fuels. It is one of 150 countries to have signed up to the Global Methane ...
