How will the residential solar market grow over the next decade?

The residential solar market will continue to grow steadily, driven by retail rate inflation, resiliency concerns, product innovation, and third-party ownership momentum with a focus on ITC adder qualification. In our Base case forecast, the segment will more than triple over the next decade, adding more than 96 GWdc by 2035. 3.2. Commercial PV

How much solar power did the US solar industry install in 2024?

In 2024, the US solar industry installed nearly 50 gigawatts direct current (GWdc) of capacity, a 21% increase from 2023. This was the second consecutive year of record-breaking capacity. Solar accounted for 66% of all new electricity-generating capacity added to the US grid in 2024, as the industry continued experiencing record growth.

How are the proposed measures affecting the solar sector?

The proposed measures have varying degrees of impact on each solar segment. We have identified some initiatives that are contributing to a challenging environment for the sector: Energy emergency declaration. President Trump declared an energy emergency, prioritizing thermal and hydropower generation over wind, solar and storage.

Will the residential solar market recover this year?

The residential solar market will experience some recovery this year, with 9% growth. The segment experienced significant turmoil last year, with numerous installer and financier bankruptcies. Although interest rates declined, rate cuts occurred later in the year and were not as impactful to financing rates as expected.
